Subject: Assignment 9 – Cloud Computing

In Assignment 09, I learned how to deploy a SQL Server environment in the cloud using AWS RDS, load a Greenhouse Gas (GHG) database, and create a Power BI dashboard to analyze the data. I gained hands-on experience with AWS Academy, including setting up an RDS instance, configuring security settings, and connecting to the database using SQL Server Management Studio (SSMS) and Power BI. Through this process, I explored the benefits of cloud computing, such as scalability, cost savings, and accessibility, while also understanding its challenges, including security risks and downtime concerns. Additionally, I learned about the top cloud service providers (AWS, Azure, and Google Cloud) and how cloud-based solutions enable efficient data analysis and visualization.
